

BIDXCHANGE · USER TRAINING

From opportunity to reviewed response

A practical walkthrough for your first bid

USER GUIDE / SEPTEMBER 2026

bidxapp.vercel.app

Follow one bid through the workspace

01

Set up Company

Record company details and sources.
Verify current information.

02

Capture and review

Add the opportunity.
Create a pursuit and its requirements.

03

Draft and export

Create the response outline.
Complete, review and download it.

One source of company information. A separate review trail for each pursuit.

Sign in and choose the right workspace

01

Open the app

Go to bidxapp.vercel.app.
Sign in with your own account.

02

Check your company

Confirm the selected organization
before entering or editing
information.

03

Know the demo

The public demo uses fictional
data.
Real response documents require
an authorized company
workspace.

If your workspace or controls are missing, ask your organization administrator to check access.

Learn the main navigation

Start with these areas

Today: open work and deadlines.
Company: reusable company facts.
Opportunities: source bids.
Pursuits: review and response work.
Assistant: questions and help.

Public demo screenshot · fictional company and sample data

Complete Company before drafting

01

Identity and contacts

Legal and operating names.
Website, mailing address, phone
and business email.
Authorized representative.

02

Business credentials

Record public identifiers,
registrations and NAICS.
Add relevant licenses, capabilities
and service areas.

03

Source every record

Add an evidence reference.
Set an owner and effective or
expiration dates where applicable.

Enter details once in Company so current eligible information can populate future documents.

Understand what makes a fact reusable

01

Capture

Save the known information and source.
New or corrected records need verification.

02

Verify

An authorized reviewer checks the evidence and records verification.
Use workspace visibility only when appropriate.

03

Review its use

Relevant qualification claims need current approval for the specific pursuit requirement before autofill.

Editing a company record resets its verification. Expired and restricted records do not autofill shared responses.

Capture the source opportunity

Use Add opportunity

Enter the opportunity title.
Provide a source URL or traceable source note.
Add buyer, solicitation number, scope and official deadline when known.
Save, then open the record.

BIDXCHANGE / USER GUIDE

07 / 19

Create a pursuit for the bid

01

Open the opportunity

Read the scope, source and deadline.
Check whether a pursuit already exists.

02

Start the workspace

Choose Create planning workspace if needed.
Open the saved pursuit.

03

Organize the work

Use its requirements, evidence reviews, tasks, decision section and response packages.

Creating a planning workspace keeps the decision pending; it does not authorize a bid.

Turn notice language into requirements

01

Identify the source

Record Notice title and version.
Add the Page or section.
Paste the relevant Source text.

02

Find and inspect

Choose Find possible requirements.
Check each candidate against the full notice and its exceptions.

03

Save the requirement

Confirm the wording and citation.
Assign a requirement owner.
Use Add requirement for anything missed.

The excerpt tool finds candidate lines; it does not certify a complete requirements register.

Connect each requirement to evidence

01

Choose the evidence

In the requirement, review the relevant saved company record and its source.

02

Record the decision

Authorized reviewers set Applicability, Proposal use, and Reason and limits.

03

Watch for change

Approved for this requirement is scoped approval.
Previous approval needs review means reassess the current sources.

A task marked complete or a fact marked verified is not the same as approved proposal use.

Assign work and record bid intent

01

Make follow-up explicit

Add a task inside the pursuit.
Assign an active team member.
Set the due date and status.

02

Use Today

Check open and overdue work.
Open the linked pursuit to act.
Refresh after completing tasks.

03

Record the decision

Authorized decision makers
choose Pursue bid, Do not bid or
Reopen review, with reasons and
conditions.

A Pursue bid decision records intent. Final pricing, document approval and submission remain separate.

Choose the assistant mode for the job

01

General questions

“Explain how a bid bond works.”
“Help me write a professional follow-up email.”
General answers use no company records.

02

Workspace records

“Summarize this pursuit.”
“What tasks are overdue?”
Inspect the returned evidence and sources.

03

Document commands

Open a pursuit first.
“Create an RFP for this bid”
The selected pursuit supplies the document context in either mode.

Questions are answered independently. Include needed context; never enter passwords or API keys.

Ask for a response, then open the draft

“Create an RFP for this bid”

01

Open the pursuit

Use the assistant within the bid's pursuit workspace.

02

Send the command

RFP, RFI and RFQ response commands are supported.
Capture/admin access is required.

03

Open the result

Choose Open response workspace.
Find the saved response card and select Edit this draft.

This creates a contractor response outline—not a buyer-issued solicitation or a completed proposal narrative.

Check the information that fills itself

01

Company

Names and website.
Current verified contacts and public registrations.
Relevant approved qualification evidence.

02

Bid

Buyer and solicitation.
Saved scope and deadline with time zone.
Notice URL, source references and requirements.

03

Preview and correct

Open Automatically included: company and bid information.
Use Update company information to fix gaps.

Downloads refresh automatic values from current records; your written answers remain as saved.

Finish the draft before downloading

01

Write and save

Choose the response type and draft name.
Complete the overview and each requirement answer.
Save the draft.

02

Review the saved version

Choose Review saved draft.
Inspect missing answers, placeholders and changed wording.
Use the direct edit links.

03

Read it end to end

Open Read complete saved draft.
Check the company information, evidence, answers and internal checklist.

“Answers drafted” measures writing progress. It is not a compliance score or approval.

Export a working copy for review

01

Save first

Downloads use saved answers. Finish the latest edit and open the saved response card.

02

Choose the format

Download saved draft PDF for a stable review copy.
Download saved draft Word for further editing.

03

Review and hand off

Check the Draft markings and internal checklist.
Obtain the required approvals and follow the buyer's submission instructions.

Word edits do not sync back into BidXchange. A download does not submit anything to the buyer.

Know who owns the next action

01

Administrator

Manage company records and access.
Capture bids and responses.
Perform authorized evidence and bid reviews.

02

Capture manager

Add opportunities and requirements.
Manage pursuit tasks.
Create, edit and export response drafts.

03

Executive / other members

Executive approvers review evidence use and bid intent.
Other members work within assigned permissions; readers can inspect shared drafts.

If a control is absent, check your role and workspace. Access to a page does not grant authority to approve.

Resolve the common stopping points

01

Information missing?

Complete Company and source fields.
Verify eligible records.
Review qualification use for the specific requirement.

02

Source changed?

Reload the pursuit.
Compare the new wording and evidence.
Reconcile retained answers and save again.

03

Assistant or export unavailable?

Check access and workspace activation.
Wait if a usage limit is reached.
For a PDF glyph error, try Word.

Do not recreate records blindly after a failure. Check whether the draft or pursuit already saved.

Practice once, then make it routine

01

Practice · 10 minutes

Use an authorized training workspace.
Add a clearly labeled practice opportunity and source note.
Create its planning workspace.

02

Build the response

Add two cited requirements and one task.
Ask for an RFP response.
Replace placeholders, save and inspect the review.

03

Daily rhythm

Start in Today.
Review upcoming deadlines and changed sources.
Finish assigned work, then save and review the response.

Your first milestone: one traceable, saved response draft that another team member can review.
